

Randell Calilung

FRONTEND DEVELOPER | AUTOMATION & WEB OPTIMIZATION
SPECIALIST

San Fernando, Pampanga, Philippines | +639915895413 |
calilungrandell@gmail.com | [LinkedIn](#) | [Portfolio](#)

Objective

Detail-oriented IT professional with hands-on experience in front-end development, web optimization, and process automation. Skilled in building responsive web pages, improving site performance, and supporting digital content workflows. Eager to contribute technical expertise, quality assurance focus, and process improvement mindset to ensure high-quality digital performance and support business efficiency.

Experience

FCI London | Automation Specialist August-November 2025

- Designed, implemented, and maintained automation solutions to improve operational efficiency, reduce manual workload, and enhance system reliability across facility processes.
- Developed and optimized automated workflows for monitoring, reporting, and equipment operation, ensuring compliance with organizational and regulatory standards.
- Diagnosed and resolved automation-related issues, performing root-cause analysis and deploying long-term corrective measures.
- Collaborated with cross-functional teams—including engineering, IT, and operations—to integrate new automated systems and improve existing processes.
- Created documentation, SOPs, and training materials to ensure effective adoption of automated tools and technologies.
- Leveraged data insights to identify areas for process improvement and support continuous optimization initiatives.

City Information and Communication Technology Office | Software Developer Intern 2024-2025

- Boosted system efficiency by 60% through backend optimization and database indexing
- Reduced frontend load times by 70% by implementing SPA architecture with Inertia.js and React
- Enhanced reporting accuracy by 50% via real-time data updates using WebSocket (Pusher)
- Streamlined deployment and improved dev consistency using Docker with Laravel + Nginx stack
- Cut admin task time by 40% by developing dynamic dashboards and reusable UI components
- Improved maintainability by structuring scalable data models and normalizing relationships
- Strengthened data integrity by implementing soft deletion, validation, and secure CRUD logic
- Improved user experience with multi-image upload, email verification, and drawer-based UI

Education

City College of San Fernando Pampanga | BS in Information Technology

2021-2025

- Consistently achieved academic excellence in both theoretical and hands-on IT courses
- Specialized in web development, UI/UX design, and e-commerce systems using Laravel, React, and modern web stacks
- Developed a Library Management System (Java, MySQL) for thesis, and a mobile IoT-based app (Flutter, Django, Firebase) for capstone project
- Built small-scale e-commerce prototypes integrating dynamic frontends and secure backend logic
- Applied data science and machine learning concepts in academic exercises and exploratory projects
- Relevant coursework: Software Engineering, Web Development, E-Commerce, System Design, Database Management
- Proficient in Adobe tools (XD, Photoshop) and Canva for wireframing, mockups, and visual design

Technical Skills

- **Frontend & Web Optimization:** HTML5, CSS3 (modern techniques, responsive design, cross-browser compatibility), Tailwind CSS, Bootstrap, React, Inertia.js
- **Performance & QA:** Website speed optimization, accessibility checks, dashboard/reporting for continuous improvement, task QA and validation
- **Content & CMS Exposure:** Dynamic content implementation, content review, basic CMS familiarity (WordPress/Shopify personal projects)
- **Automation & Workflow:** n8n, Zapier, Python scripts for process efficiency, REST API integration, task automation
- **Reporting & Office Tools:** Excel, Word, PowerPoint, Google Sheets, Looker Studio dashboards
- **Methodologies & Collaboration:** Agile/Scrum, structured code reviews, documentation, SOP creation, process improvement mindset
